What Have We Learned Through Medication Error Reporting?

» [Click Here to Register](#)

OVERVIEW:

Medication safety is one of the major components in patient safety. Medication error reporting systems are established to identify the contributing factors and causes of the errors. This system requires collective effort from regulatory, accreditation parties and a change in the way we manage medication errors.

Join Institute for Safe Medication Practices (ISMP) experts in this webinar as we examine the progress made in medication safety over the years through error reporting. Discussion on the role of error data and confidential reports, and how both are critical to improve medication safety will be included. Speakers will share their experience on how reports were used to make recommendations, working with other government organisations and vendors to make industry practice changes and make advances in technology.

TARGET AUDIENCE:

- » Medical Directors/ Physicians, Nurses and Caregivers in hospitals
- » Hospital Pharmacists
- » Hospital Administrators
- » Educational institutions/medical schools with pharmacy programs
- » Patient safety officers/advocates

TOPICS AND FACULTY:

Moderator and Introductions

Philip Hodsman, *Business Development Manager, ECRI UK*

Progress in Medication Safety Through Medication Error Reporting (ISMP MERP)

Michael Cohen, *President, ISMP*

Role of Error Data and Confidential Reports in Improving Medication Safety

Christina Michalek, *Medication Safety Specialist, ISMP*

Q&A Panel

David Cousins, *former Chief Pharmacist, National Patient Safety Agency (NPSA) and NHS England*
