

Save money, improve patient safety and ensure optimum medical capital inventory.

Choose the ECRI components that best support your department, facility, or healthcare system mission:

Leading Asset Management system that is scalable, manages device maintenance and is a platform for predictive replacement planning.

-  Data cleaning and standardised nomenclature of your inventory.
-  The current inventory status is the starting point.

-  Identify opportunities to save costs through rationalisation of your assets.

-  Utilise internal and external benchmarking of inventory size, age, risk, specifications, and cost.

-  Utilising experience gained by managing 8,000,000 assets across 3,000 healthcare organisations internationally.

Predictive Replacement Planning

- Stakeholder interviews to ensure we support your organisational goals, whether they be service lines, budget expectations or enabling other programmes.
- Utilising the vast independent databases of ECRI to ensure the most appropriate technology decision making according to cost, safety and quality.

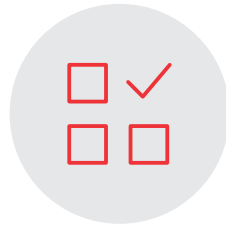

ECRI benchmarks, scores, weighs, and prioritises assets to deliver your plan. ECRI's report analysis also considers:

- Condition of the device.
- Device safety - incidents, recalls, cybersecurity.
- Ability to support the device.
- Potential for rationalisation and relocation of equipment.
- Impacts if the device fails unexpectedly.

How ECRI's Asset Management and Replacement Planning Will Save You Money:

Planned purchases allow better negotiations with vendors versus emergency purchasing if a device becomes inoperable.

Equipment standardisation reduces costs associated with parts, maintenance contracts, and training.

Increases patient safety by reducing near misses due to equipment malfunctions.

Allows for strategic decisions by reallocating underutilised resources.

Grouping purchases into logical groups allowing for the lowest price to be negotiated.

In today's environment with limited capital budgets, a long term, but flexible capital replacement plan is essential to prioritising capital purchases.
